

SOCIETY OS · AN AI SERVICE ORGANIZATION

Host A City Conversation

A free kit for anyone, anywhere, to host 90 minutes on getting AI right, together, in your own city and your own time zone. Grown from the ground up: by word of mouth, and word of mouse.

The question every city starts with

How should our communities prepare for AI moving into our workplaces and shared spaces, including robotics?

What A City Conversation Is

A City Conversation is a free, open, 90-minute gathering of local people, in person or online, about how AI is changing work, home and community, and what we want to do about it. It follows the same principle as Rotary and Lions Club, rebuilt for the Agentic Era: local people meet, learn and serve, so AI is shaped by communities rather than decided for them somewhere else.

There is no head office running it and no time zone problem. You host it, at a time that suits your neighbours. You do not need to be an expert. Your job is to welcome people, keep time, keep it kind, and help the group agree one local action.

Four Steps

1 Download The Kit

You are reading it. Running sheet, house rules, host script and invitation text.

2 Put Your City On The Map

Go to spaceplace.abacusai.app/host. Pick a date, a time in your own time zone and a public place or an online link. You get a page to share.

3 Invite Five People

Word of mouth first: friends, neighbours, colleagues. Each person who joins can invite five more.

4 Host, Then Report Back

Run the 90 minutes, agree one local action and post it on your private host page. It appears on your city's page for the next host to build on.

The Three Lenses

AI And Self: How do I use AI well, and stay myself?

Personal tools, skills, wellbeing, privacy and judgement. Learning to use AI without handing over your agency.

AI And Sphere: How do my family, team and business adopt AI together?

Households, teams and businesses. Choosing systems, not just tools, and sharing what works and what does not.

AI And Society: How should our community, city and country shape AI?

Work, shared spaces, robotics and local rules. Keeping people involved so AI is not decided for us somewhere else.

The 90-Minute Running Sheet

10 min	Welcome And House Rules First names, where you live, and one sentence on why you came. Read the house rules aloud.
5 min	The Question Read the inaugural question: “How should our communities prepare for AI moving into our workplaces and shared spaces, including robotics?”
15 min	Self: AI And Me Where is AI already in your work and daily life? What do you want it to do for you, and what should it never do?
15 min	Sphere: AI And The People Around Me Family, workplace, clubs and local businesses. Who is being helped, and who is being left behind?
15 min	Society: AI And Our Community Schools, councils, shared spaces and local jobs, including robotics. What should our community decide for itself?
20 min	One Local Action Agree one small, real thing the group will do before the next conversation. Write it down in one sentence.
10 min	Close And Invite Set the next date. Ask everyone to bring one person next time and to share the city page.

Tip: put a phone timer on for each block. If a block runs long, take time from Society, never from One Local Action.

House Rules (Read Them Aloud)

- AI suggests; people decide.
- Difference of opinion is welcome. Disagree with ideas, never attack people.
- One voice at a time. Everyone who wants to speak gets a turn.
- No selling, no recruiting, no politics of party.
- What people share about themselves stays in the room. Nothing is recorded without everyone’s agreement.
- Trade Dollars (\$T), \$H and \$E are a future vision: not issued, and no offer is being made.

What To Say First

“Welcome. Thanks for coming. This is a City Conversation, part of Society OS, an AI Service Organization.”

“The idea is the same as Rotary and Lions Club, rebuilt for the Agentic Era: local people meet, learn and serve, so AI is shaped by communities rather than decided for them.”

“I’m not an expert and I’m not selling anything. I’m just hosting. Tonight we look at AI through three lenses: Self, Sphere and Society, and we finish by agreeing one local action.”

“Before we start, here are our house rules...”

Inviting People

Invite five people you know personally. Ask each of them to bring one more. Share your city page on WhatsApp, text, email or your own social accounts. Please don't send bulk or unsolicited messages.

Invitation you can copy

I'm hosting a free City Conversation in [your city] on [day, date and time]: local people talking about how we get AI right, together, at work, at home and in our community. No cost, no selling, everyone welcome.

Details and RSVP: [your city page link]

Host Promises

- I will follow the house rules and the running sheet, and keep the conversation free and open to everyone.
- In person, I will meet in a public place (a library, community hall or café), never a private home.
- I will not sell anything, collect money or promise returns, and I will describe \$T as a future vision only.

Keeping Everyone Safe

- Meet in a public place. Never publish a home address.
- Under-18s attend only with a parent or carer, or under the venue's own supervision rules.
- If someone becomes distressed, pause, check in privately and share Lifeline (13 11 14 in Australia) or your local equivalent. In an emergency call 000 (or your local number).
- For online sessions, share the link only with people who joined, and remove anyone who disrupts.

Report Back

When you register at **spaceplace.abacusai.app/host** you get a private host link. Bookmark it, because no emails are sent yet. After the conversation, open it and post roughly how many came and the one local action you agreed. The action appears on your city's page and on the Host map, so the next host can build on it. Only counts are shown, never the names of people who came.

Notes For Your Conversation

Our one local action:

Next date, time and place:

Honest claims: Society OS Pty Ltd is a company, not a charity. City Conversations are free and never affect ranking or trust levels. Trade Dollars (\$T), \$H and \$E are a future vision: not issued, no offer is being made, and nothing in this kit is financial advice. AI suggests; people decide.
